

1 24. A method according to claim 22, wherein the angle is
2 determined responsive to reference data of actual camera alignment
3 in real space obtained contemporaneously with the frame concerned.

REMARKS

The claims are claims 1 to 24.

The application is amended in response to the NOTICE OF OMITTED ITEM(S) IN A NONPROVISIONAL APPLICATION of September 1, 2000. The Applicant elects option (III), acceptance of the application as deposited in the PTO on July 13, 2000. The NOTICE OF OMITTED ITEM(S) IN A NONPROVISIONAL APPLICATION indicated that page 22 was missing in the application as deposited. Accordingly, page 23, the only following page, has been renumbered as page 22.

Claims 23 and 24 have been added by this preliminary amendment. Claims 23 and 24 appeared on the omitted page 22. Because these claims are fully disclosed under 35 U.S.C. 112 in the application as deposited, addition of these claims at this time is proper.

The Applicant respectfully requests early consideration on the merits and advance to issue.
